

# G-Force

Occupant injury depends on the G-force to the body. The G-force to the body is the result of the Delta-V. Estimates of G-Force to the occupant's body can be obtained on a lien basis.

Please send the following information with your Delta-V request for a G-force estimate.

Occupant:

- Male       Female  
 Driver       Passenger (FR, RL, RC, RR)

Height: \_\_\_\_\_

Weight: \_\_\_\_\_

Body Area (Pelvis, Torso, Chest, Neck, Head)

- Head     Neck     Back     Low Back

Multiple body areas can be chosen. The head, neck, back and low back G-Force estimates are the most accurate because of the direct contact with the vehicle seat and restraints.

Extremities would require additional contact surfaces not shown above.
